INTERNATIONAL REFERENCE GUIDELINE
FOR THE
IMPLEMENTATION OF
TRANSPORT EDI MESSAGES

COPARN

CONTAINER ANNOUNCEMENT MESSAGE

GUIDELINE FOR THE UN/EDIFACT
D.95B COPARN MESSAGE

DOCUMENT REFERENCE : SMDG16

Issued and Authorised by the SMDG User Group for Shipping Lines and
Container Terminals, a "Global User Group" under the auspices of
UN/CEFACT

VERSION 1.6 – 2

May 2016

Revision History

Version	Date	Author(s)	Revision Notes
1.2	March 2003	SMDG	Created version
1.6	October 2015	Paul Wauters	Extended for Gross Weight Verification
1.6-1	January 2016	Paul Wauters	Updated UNECE official codes/qualifiers
1.6-2	May 2016	Paul Wauters	Streamlined additions with existing info

GENERAL INTRODUCTION

SCOPE OF THIS DOCUMENT

This document has been developed by the International Transport Implementation Guidelines Group (ITIGG) and covers maritime-related electronic data interchange (EDI). Specifically it provides guidance as to the recommended usage of codes, qualifiers, data elements, composites, segments and groups of segments in the D.95B COPARN message.

This document has been developed as part of a set of reference guidelines for the following maritime-related container messages:

CODENO	Container Permit Expiration/Clearance Ready Notice
COEDOR	Container Stock Report
COHAOR	Container Special Handling Order
COREOR	Container Release Order
COPINO	Container Pre-Notification
COPARN	Container Announcement
CODECO	Container Gate-in/Gate-out Report
CALINF	Call Information
VESDEP	Vessel Departure
COARRI	Container Discharge/Loading Report
COPRAR	Container Discharge/Loading Order
COSTCO	Container Stuffing/Stripping Confirmation
COSTOR	Container Stuffing/Stripping Order

The intention is to provide guidance to developers to ensure consistent use throughout the worldwide trade and transport community.

By establishing this consistency, trade and transport organisations and their supporting software developers and value-added network suppliers can develop products and services incorporating EDI messages which will be interchangeable and readable by other like services throughout the world.

DOCUMENT REFERENCE

The reference of this document is SMDG16 and Is based on JM4/ITIGG/96.106 which refers to document number 106 issued in 1996 by UN/EDIFACT Joint Message Development Group 4 (Transport), through its International Transport Implementation Guidelines Sub-Group.

RELATED DOCUMENTS

This document should be read in conjunction with the following documents:

- The general introduction to usage of the Container Message set, entitled "Guide to the UN/EDIFACT Container Handling Messages" (Guide to the Scenario of EDIFACT Container Messages), document number JM4/ITIGG/9/102. The purpose of that document is to outline for users, the use and interrelationship between the various UN/EDIFACT container handling messages developed by the JM 4 Group.
- The document entitled Principles and Rules for the Implementation of Transport EDI Messages - Transport Equipment Movements", number JM4/ITIGG/96.101. This document provides a complete set of detailed and annotated recommendations on usage of each segment in the container message set.

UN/EDIFACT DIRECTORY REFERENCE

This document is based on the UN/EDIFACT D95B directory. This directory has been designated by JM4 (Transport) as the basis for all global implementations and associated guidelines for the Container Message set. A review of this document will be undertaken during late 1997/early 1998.

COMPLIANCE WITH ITIGG PRINCIPLES AND RULES

At its Helsinki meeting in September 1996, JM4/ITIGG agreed on specific conditions for compliance with the Principles and Rules laid out in this document. These conditions take the form of Recommendation JM4/50, which reads as follows:

> *JM4 recommends that user groups use the documents issued by ITIGG for Principles and Rules (P&R) for specific sets of messages to the fullest extent possible.*

> 1.0   *JM4 allows user groups to describe their specific Message Implementation Guidelines (MIGs) as* **'compliant with the ITIGG Principles and Rules document Version *.*'** *provided that:*

> 1.1   *The usage indicators in the user group MIG are derived from the relevant Principles and Rules document according to the following rule:*

Usage Indicator in UNSM	Usage Indicator in P&R document	Usage Indicator in specific MIG
Mandatory (M)	Mandatory (M)	always Mandatory (M)
Conditional (C)	Required (R)	always Required (R)
Conditional (C)	Dependent (D)	may be Dependent, Required, Optional or Not Used (D,R,O,X)
Conditional (C)	Optional (O)	may be Optional, Dependent, Required or Not Used (O,D,R,X)
Conditional (C)	Not Used (X)	always Not Used (X)

> 1.2   *The General Recommendations approved by JM4 and issued through ITIGG are followed.*

> 1.3   *The code values and qualifier values in the specific MIG should be chosen from those recommended by ITIGG in the relevant P&R Document.*

> 1.4   *Where these conditions are followed, the Guideline may be identified with the appropriate ITIGG version code (ITG**) in date element 0057 of the UNH.*

> 2.0   *In case user groups feel the need to deviate from the above compliance conditions an Implementation Change Request (ICR) is to be put forward to the regional UN/EDIFACT Transport Group. Where a guideline is published which does not comply with these conditions data element 0057 should not contain the ITIGG code.*

> 3.0   *When agreed in ITIGG the ICR will be incorporated in the next release of the relevant P&R document.*

> *The specific MIG is to be identified in DE 0057 in accordance with the rules set out in General Recommendation JM4/5.*

BACKGROUND

It was the development of UN/EDIFACT messages in the Transport sector which initiated the formation of a global UN EDI standards organisation and this development has continued to progress from the inception of the UN/EDIFACT standard to the present time.

Message structures essential to the use of electronic commerce in the Transport sector have been agreed and approved by the relevant authorities up to and including Working Party 4 (Trade Facilitation) of UN/ECE. Over the past five years these messages have been implemented by various communities in the six UN/EDIFACT regions.

These existing implementations have, in most cases, developed in isolation and this has resulted in differing interpretations of the standard messages. In turn this has resulted in a lack of international synergy with regards to the use of codes, qualifiers, data elements, composites, segments, groups of segments and even the messages themselves.

The UN/EDIFACT Joint Message Development Group for Transport (JM4) has recognised that this lack of synergy represents a serious inhibitor to the growth of global electronic commerce.

As the harmonisation of implementation guidelines of UN/EDIFACT messages was not a formal work task of the Joint Rapporteurs Team (JRT) meeting - its purpose was to establish and maintain message structures and data directories - the interested members of JM4 (Transport) formed an informal group to attempt to harmonise known message implementation guides and user manuals and to provide a basis for intending implementers to proceed with confidence.

In late 1994 and early 1995 the group met informally to make recommendations on how codes, qualifiers, elements, segments and messages should be used. The progress made by this relatively small group of experts (less than 20) encouraged the group to formally establish itself as the International Transport Implementation Guidelines Group (ITIGG).

The aims and existence of ITIGG were announced after a meeting in Oakland, CA in July 1995. It was agreed that ITIGG would set itself the major objective of compiling and issuing a document in the first quarter of 1996 which would provide the principles and rules for the international implementation of electronic messages in the transport industry. This document which deals primarily with the maritime sector, represents the achievement of that objective. The future objectives of ITIGG are to incorporate the work of harmonising guidelines from other modes of transport covering air, road, rail and other means of inland transport.

At the UN/EDIFACT Joint Rapporteurs Team meeting in Oxford UK in September 1995, the JM4 (Transport) work group decided to recognise ITIGG as the source of guideline harmonisation information and leadership. JM4 also took a decision to officially accept ITIGG as a sub-group of JM4 (Transport).

At the Helsinki JRT meeting in September 1996 it was agreed that a formal working group should be established within the JRT process to commence the work of comparing and harmonising segment usage between different industry sectors. This has received the endorsement of other key working groups within UN/EDIFACT.

This formal working group (known as T8) met for the first time at the Singapore JRT meeting in April 1997, and has commenced the task of comparing the usage of common segments by different industry sectors.

STATUS INDICATORS AND USAGE INDICATORS

Status Indicators

Status Indicators (M and C) form part of the UN/EDIFACT standard and indicate a minimum requirement to fulfil the needs of the message structure.

The Status Indicators are:-

Value	*Description*
M	Mandatory This entity must appear in all messages. Shown as Usage Indicator "M" in Implementation Guidelines.
C	Conditional This entity is used by agreement between the parties to the transaction.

A 'Conditional' Status Indicator may be represented by a supporting Usage Indicator which is either R, O, D or X (see below)

Usage Indicators

Throughout this document reference is made to indicators (M, R, D, O and X) which are shown adjacent to data items and which dictate for the particular message or set thereof the agreed usage of the data items or entities.

Set out below are the indicators and their respective uses:-

Value	*Description*
M	Mandatory Indicates that this item is mandatory in the message.
R	Required Indicates that this entity must be sent in this implementation.
D	Dependent Indicates that the use of the entity depends upon a well-defined condition or set of conditions. These conditions must be clearly specified in the relevant implementation guideline.
O	Optional Indicates that this entity is at the need or discretion of the sender of the message.
X	Not Used Indicates that the entity is not to be used is this message implementation.

Where an element within a composite is marked "M" or "R", but the composite has been marked "O" or "D", this indicates that the element must always be transmitted only if the composite is used.

Implementers are advised to include the above information on Usage and Status Indicators in their Implementation Guidelines.

CHANGES IN THIS VERSION

SMDG16

SMDG 16, maintained by SMDG, is the next upgrade after ITIG14 as maintained by ITIGG. Version 1.6, first released October 2015, includes amendments for transmission of data specifying a container's verified gross mass (VGM) according to SOLAS regulation 2,chapter VI, paragraphs 4-6.

With a short deadline (July 2016) it was decided to do minimum changes - what was considered as an absolute (legal) minimum - to limit the impact on EDI and backend systems of different organizations.
It was decided to make additions in the current version without structure changes via existing segments and data elements. Only necessary new qualifier and codes will be requested via DMR.

To handle the new SOLAS requirements on Gross Mass Verification, DMR (Data Maintenance Request) for new codes, to handle the new entities, will be submitted to UN/CEFACT.
The acceptance of these DMR's are available as from version D.15B The Message Implementation Guides can use 'Temporary' codes indicated between square brackets [**xxx**] and codes only available in a later version.
Changes for SOLAS in this manual: (codes used as available from UN/EDIFACT version D.15B or current directory.)

EQD group segments additions:

MEA – Measurements
>   **VGM** – Verified Gross Mass (weight)

NAD – Name and Address
>   **AM** – Authorized official – person signing for Verified Gross Mass
>   **SPC** – SOLAS Packed Container Verified Gross Mass Responsible party

DTM – Date/Time
>   **798** - Verified gross mass determination date/time - Date/Time when a gross mass (weight) of a packed container was obtained according to SOLAS chapter VI, regulation 2, paragraphs 4-6

FTX – Free text (ABS) container condition – SMDG maintained codes
>   **SM1** – Solas Method 1 – Verified Gross Mass obtained by weighing
>   **SM2** – Solas Method 2 – Verified Gross Mass obtained by calculation

RFF – References
>   **VGR** – Verified Gross Mass Reference – link to VGM information
>   **VOR** – Verified Gross Mass Order Reference – embedded instruction to obtain VGM

DOCUMENT MAINTENANCE

The data content of this document has been prepared and approved by UN/EDIFACT JM4/ITIGG and no alteration may be made to the content of this document without reference to and approval of JM4/ITIGG.

Any remarks, questions, amendments or requested alterations to this document are to be addressed to:-

THE COPARN MESSAGE

FORMAL DEFINITION

"The message contains an order to release, to make available, to accept or to call down containers or to announce the impending arrival of containers.

"This message is part of a total set of container-related messages. These messages serve to facilitate the intermodal handling of containers by streamlining the information exchange. The business scenario for the container messages is clarified in a separate document, called: 'Guide to the scenario of EDIFACT container messages'."

The 'Guide to the scenario of the EDIFACT container messages' has been published by ITIGG under the title "Guide to the UN/EDIFACT Container Messages" (Document reference JM4/ITIGG/96.103).

CLARIFICATION

The COPARN message is intended to perform a variety of instruction or request functions associated with equipment movements which are to occur at a future time, such as authorising release of an empty container for packing, or authorising acceptance of a container by a facility.   Examples include:

.   requesting or authorising acceptance of an empty return
.   requesting or authorising acceptance of a full container
.   releasing an empty container for packing
.   requesting and authorising an on/off hire transaction

In most such functions it will be answered by a corresponding CODECO message confirming that the equipment movement or status change has taken place.

USE OF THE EQD GROUP

This guideline provides for the transmission of multiple equipment movements, through repetition of the EQD Group. The design of the COPARN message allows for the reporting of transport details associated with a container at both message level or EQD level.

Where appropriate, main carriage (ie. Ocean transport) details may be specified in the TDT Group at message level. Inland transport details (ie. road, rail or barge) associated with a movement into and out of a facility must always be reported at the EQD level.

The current design of the COPARN message allows for only one repetition of the TDT Group at message level. As a result, only one main carriage (ocean vessel) can be specified for all containers reported in each message at EQD level. Where the message is used to authorise multiple equipment movements, the authorising party would therefore be obliged to sort movements according to main carriage before transmission, and send one COPARN per vessel.

This approach does not align with business practice in many regions, including North America and Australia/New Zealand

It should be noted that the usage of the COPARN outlined in this guideline will be applied in some regions on a one-message-per-movement basis (ie. *only one repetition of the EQD Group)* to facilitate implementation

without substantial re-design of established systems. Although the Guideline provides for up to 999 repetitions of the EQD Group, *only one will be used.*

Other regions may choose to adopt a multiple-movement-per-message usage (ie. multiple EQDs), if this aligns with local business practice.

Global users should be aware that these different approaches will be implemented in different regions, and should make allowances accordingly.

Discussions will be held within ITIGG and the JM4 Transport Group towards preparing changes to future versions of the CODECO message which will allow multiple repeats of the TDT Group at message level, and a means of associating each repetition of the EQD Group with a particular main carriage TDT.

Until such time as this process has been completed and the EDIFACT message is enhanced, users are advised to implement according to the principle outlined above.

This does not apply in situations where main carriage is not to be reported. In these cases, multiple repetitions of the EQD Group may be transmitted, provided this aligns with business practice. Global users should, however, be aware that communities in regions where one-message-per-movement already prevails are likely to implement according to this principle even where Main Carriage is not required.

USE OF THE FTX SEGMENT AT EQD LEVEL

In this Guideline the FTX at EQD level has been used for transmission of a variety of coded information, including codes which report on the status of the item of equipment.

This usage has been agreed as a temporary measure until such time as clear industry requirements emerge from live usage of the message, and a number of changes to the COPARN message are completed in future versions. It is likely that new segments will be inserted in future versions of COPARN, or new codes specified in future versions of the EDIFACT code list, to cover functions performed by the EQD level FTX in this guideline. This is not, however, likely to occur for some years.

Nevertheless users should implement with this in mind.

USE OF THE GID GROUP

The GID Group is designed to provide cargo information, which is in fact a secondary consideration in messages reporting equipment movements. In this guideline it has been made available to provide brief cargo detail where it is required by users.

The majority of users will only use the GID Group in the COPARN message for reporting supplementary information, such as temperature or dangerous goods details relating to cargo in a full container or a pre-set setting on an empty container. It is already apparent that these users will therefore not require the GID segment other than as a dummy value to trigger the GID Group. This usage has been provided for in the guideline.

All users should be aware that in the longer term some segments may be added to the EQD Group to allow these users to dispense with the GID Group altogether.

SEGMENT TABLE of the COPARN MESSAGE

0010	UNH Message header	M 1	Mandatory

O   SEGMENT GROUP 1 - TDT

Group Function: A group of segments to indicate information regarding the main carriage.

Group Repeats: 9
Group Status: Conditional
Group Usage: Optional

Clarification: The TDT Group at this level identifies the main (ocean) carriage details for all items
                             of equipment in the message, where this is applicable. Where main carriage details
                             are not relevant or not known at the time of the reported movement, the segment is
                             not required at this level.

                             Recommendation JM4/210 refers.

M   TDT   TRANSPORT DETAILS

Segment Function: To specify the transport details such as mode of transport, means of transport, its
                             conveyance reference number and the identification of the means of transport.

Message Level: Group 1
Segment Repeats: 1
Segment Status: Mandatory
Segment Usage: Mandatory
Sample Segment: TDT+20+S263+1++BSL:172:87+++768931:146::VESSEL NAME'

Clarification: The TDT segment must be sent if Group 1 is used.

                             Recommendation JM4/211 refers.

O	RFF	REFERENCE

Segment Function: To specify a reference

Message Level: Group 1
Segment Repeats: 9
Segment Status: Conditional
Segment Usage: Optional
Sample Segment: RFF+VON+N23'

Clarification: The RFF at this level is used to transmit voyage numbers where an alternative number is used in addition to that quoted in the preceding TDT.

Recommendation JM4/212 sets out a methodology for use of the segment.

M	C506	REFERENCE		M
M	1153	Reference qualifier		M an..3

O   LOC   PLACE/LOCATION IDENTIFICATION

Segment Function:	To identify a country/place/location/related location one/related location two.
Message Level:	Group 1
Segment Repeats:	9
Segment Status:	Conditional
Segment Usage:	Optional
Sample Segment:	LOC+9+USOAK:139:6'
Clarification:	The LOC at this level identifies locations associated with the main carriage.
	Recommendation JM4/213 refers.

M   SEGMENT GROUP 2 - NAD/CTA

Group Function: A group of segments to identify a party and/or addresses and related contacts.

Group Repeats: 9
Group Status: Mandatory
Group Usage: Mandatory

Clarification: This segment group is mandatory in the message and must always be used.

                             Recommendation JM4/216 refers.

M   NAD   NAME AND ADDRESS

Segment Function: To specify the name/address and their related function, either by CO82 only and/or
                             unstructured by CO58 or structured by CO80 thru 3207.

Message Level: Group 2
Segment Repeats: 1
Segment Status: Mandatory
Segment Usage: Mandatory
Sample Segment: NAD+CN+CODE:160:87'

Clarification: The NAD segment at this level must always be sent. It identifies parties associated
                             with all the equipment movements reported in the message.

                             Recommendation JM4/217 refers.

O   CTA   CONTACT INFORMATION

Segment Function:	To identify a person or a department to whom communication should be directed.

Message Level:	Group 2
Segment Repeats:	9
Segment Status:	Conditional
Segment Usage:	Optional
Sample Segment:	CTA+IC+:FRED BLOGGS'

Clarification:	The CTA identifies a specific contact party for the entity specified in the preceding NAD.
	Recommendation JM4/219 refers.

R	3139	CONTACT FUNCTION, CODED		C an..3
R			IC	*Information Contact*

O   SEGMENT GROUP 3 - GID

Group Function: A group of segments to describe the goods.

Group Repeats: 999
Group Status: Conditional
Group Usage: Optional

Clarification: The GID Group may be used to provide goods or cargo detail related to an item of equipment where this is required by the receiving party.

                    Recommendation JM4/227 refers.

M   GID   GOODS ITEM DETAILS

Segment Function: To indicate totals for a goods item.

Message Level: Group 3
Segment Repeats: 1
Segment Status: Mandatory
Segment Usage: Mandatory
Sample Segment: GID+1'

Clarification: The GID segment must always be sent if Group 3 is used. Some users may wish to use a dummy value in DE 1496 in order to access other segments in the GID Group (such as the TMP or TGS) which do not appear at the EQD level.

                    Recommendation JM4/228 refers.

O	HAN	HANDLING INSTRUCTIONS

Segment Function:	To specify handling and where necessary, notify hazards.
Message Level:	Group 3
Segment Repeats:	9
Segment Status:	Conditional
Segment Usage:	Optional
Sample Segment:	HAN+79:130:184'
Clarification:	The HAN at this level specifies coded or free text handling instructions related to the goods item.
	Recommendation JM4/232 refers.

O   SEGMENT GROUP 4 - GID/NAD

Group Function:

Group Repeats: 999
Group Status: Conditional
Group Usage: Optional

Clarification: The NAD Group at this level identifies parties related to the goods item.

                      Recommendation JM4/242 refers.

O   NAD   NAME AND ADDRESS

Segment Function: To specify the name/address and their related function, either by CO82 only and/or
                      unstructured by CO58 or structured by CO80 thru 3207.

Message Level: Group 4
Segment Repeats: 1
Segment Status: Mandatory
Segment Usage: Mandatory
Sample Segment: NAD+CN+CODE:160:87'

Clarification: The NAD segment at this level is used to identify parties associated with the goods
                      item.

                      Recommendation JM4/243 refers.

R					Height	

O   DOC   DOCUMENTS

Segment Function:	To identify documents, either printed, electronically transferred, or referenced as specified in message description, including, where relevant, the identification of the type of transaction that will result from this message.
Message Level:	Group 3
Segment Repeats:	9
Segment Status:	Conditional
Segment Usage:	Optional.
Sample Segment:	DOC+811+1995678GHT'
Clarification:	The DOC segment identifies documents or certificates related to the goods item.
	Recommendation JM4/230 refers.

M	C002	DOCUMENT/MESSAGE NAME		M

D   *Number of originals required*

O   SEGMENT GROUP 5 - SGP

Group Function:	A group of segments to specify containers in which goods are transported.
Group Repeats:	999
Group Status:	Conditional
Group Usage:	Optional
Clarification:	The SGP specifies the distribution of a goods item across several items of transport equipment.
	Recommendation JM4/246 refers.

M   SGP   SPLIT GOODS PLACEMENT

Segment Function:	To specify the placement of goods in relation to equipment.
Message Level:	Group 5
Segment Repeats:	1
Segment Status:	Mandatory
Segment Usage:	Mandatory
Sample Segment:	SGP+ANNU7631542:23'
Clarification:	The SGP segment is used to link a goods item to a particular item of equipment detailed in the EQD group.
	Recommendation Jm4/247 refers.

M	C237	EQUIPMENT IDENTIFICATION	M	
R	8260	Equipment identification number	C	an..17

R   *Equipment number (as it appears in the relevant EQD segment)*

X	1131	Code list qualifier	C	an..3

X	3207	Country, coded	C	an..3

O	7224	NUMBER OF PACKAGES	C	n..8

R   *Number of packages stowed in the item of equipment.*

O	MEA	**MEASUREMENTS**

Segment Function: To specify physical measurements, including dimension tolerances, weights and counts.

Message Level: Group 5
Segment Repeats: 9
Segment Status: Conditional
Segment Usage: Optional
Sample Segment: MEA+AAE+G+KGM:3.0'

Clarification: The MEA at this level reports measurements related to the split goods item.

Recommendation JM4/248 refers.

M	6311	MEASUREMENT APPLICATION QUALIFIER			M an..3

D   SEGMENT GROUP 6 - DGS

Group Function:	A group of segments to specify dangerous goods details related to a goods item.

Group Repeats: 9
Group Status: Conditional.
Group Usage: Dependent

Clarification: This group of segments should always be sent if dangerous goods are to be carried in an item of equipment.

Recommendation JM4/249 refers.

M   DGS   DANGEROUS GOODS

Segment Function: To identify dangerous goods

Message Level: Group 6
Segment Repeats: 1
Segment Status: Mandatory
Segment Usage: Mandatory
Sample Segment: DGS+IMD+8:135+1733+140:CEL+2'

Clarification: The DGS segment must always be sent if Group 6 is used.

Recommendation JM4/250 refers.

Segment Function:	To provide free form or coded text information.

Message Level:	Group 6
Segment Repeats:	9
Segment Status:	Conditional.
Segment Usage:	Required.
Sample Segment:	FTX+AAD++TECHNICAL NAME'

Clarification:	The FTX at this level should always be sent at least once to specify the technical name of the dangerous goods described in the preceding DGS segment
	Recommendation JM4/251 refers.

M   SEGMENT GROUP 7 - EQD

Group Function: A group of segments to specify containers in which goods are transported.

Group Repeats: 999
Group Status: Mandatory
Group Usage: Mandatory

Clarification: Group 7 must always be sent in the COPARN message.

                            Recommendation JM4/259 refers.

M   EQD   EQUIPMENT DETAILS

Segment Function: To identify a unit of equipment.

Message Level: Group 7
Segment Repeats: 1
Segment Status: Mandatory
Segment Usage: Mandatory
Sample Segment: EQD+CN+ANNU2341654+2020:102:5+2+2+5'

Clarification: The EQD segment must always be sent.

                            Recommendation JM4/260 refers.

R   RFF   REFERENCES

Segment Function:	A segment to specify the identifying number associated with the container, such as: - container sequence number - booking reference number (sea)
Message Level:	Group 7
Segment Repeats:	9
Segment Status:	Conditional
Segment Usage:	Required
Sample Segment:	RFF+ACD+123567'
Clarification:	The RFF at this level is used to specify reference numbers related to the item of equipment. Recommendation JM4/261 refers.

R		C506	REFERENCE		M
R	1153		Reference qualifier		M an..3

D		[ACD]	Additional Reference Number
D		[ANN]	Transport Equipment Announcement Number

O	EQN	**NUMBER OF UNITS**

Segment Function: To specify the number of units.

Message Level: Group 7
Segment Repeats: 1
Segment Status: Conditional
Segment Usage: Optional
Sample Segment: EQN+36'

Clarification: The EQN specifies the number of items of equipment conforming to the description provided in the preceding EQD (where there is more than one such item of equipment).

                           Recommendation JM4/262 refers.

M	C523	NUMBER OF UNIT DETAILS		M	
R	6350	Number of units		C n..15	
R		*Number of Units*

R   LOC   LOCATION

Segment Function:	A segment to specify ports/locations associated with the transport of a container.
Message Level:	Group 7
Segment Repeats:	9
Segment Status:	Conditional
Segment Usage:	Required
Sample Segment:	LOC+154+USOAK:139:6+TERMINAL:TER:ZZZ+GATE1:GAT:ZZZ'
Clarification:	The LOC segment at this level is used to report locations which relate to the movement of the item of equipment.
	Recommendation JM4/266 refers.

O   DIM   DIMENSIONS

Segment Function:	To specify dimensions.

Message Level:	Group 7
Segment Repeats:	9
Segment Status:	Conditional
Segment Usage:	Optional
Sample Segment:	DIM+1+INH:240:96:102'

Clarification:	The DIM segment at this level is used where dimensions exceed those of the standard reported in the preceding EQD. It relates to out-of-gauge cargo with the equipment in or on which it is to be carried. Recommendation JM4/268 refers.

M	6145 DIMENSION QUALIFIER			M an..3

D	TMP	TEMPERATURE

Segment Function: To specify the temperature setting

Message Level: Group 7
Segment Repeats: 9
Segment Status: Conditional.
Segment Usage: Dependent
Sample Segment: TMP+2+10.0:CEL'

Clarification: The TMP should always be sent where temperature-sensitive cargo is carried in an item of equipment. If a temperature range is to be specified, the TMP should be used in conjunction with the RNG segment - in this case only DE 6245 of the TMP should be used, and the temperature range should be specified in the RNG. If a single temperature setting is to be specified, C239 in the TMP should be used.

                            Recommendation JM4/269 refers.

D   RNG   RANGE DETAILS

Segment Function: To identify a range.

Message Level: Group 7
Segment Repeats: 9
Segment Status: Conditional.
Segment Usage: Optional.
Sample Segment: RNG+5+CEL:9.5:10.5'

Clarification: The RNG segment may be used to specify a range of temperatures, if applicable. It
                           should always be used in conjunction with the preceding TMP segment.

                           Recommendation JM4/270 refers.

D	DGS	DANGEROUS GOODS

Segment Function:	To identify dangerous goods
Message Level:	Group 7
Segment Repeats:	1
Segment Status:	Conditional
Segment Usage:	Dependent
Sample Segment:	DGS+IMD+8:135+1733+140:CEL+2
Clarification:	The DGS segment at this level is intended to indicate the characteristics of hazardous cargoes which have been carried in an item of equipment, and which may have left residues after unpacking. Full details of dangerous cargo in packed containers should be transmitted in the DGS Group under GID.
	Recommendation JM4/273 refers.

SEGMENT GROUP 8 - EQD/DAM

Group Function:	A group of segments to specify damage details related to the equipment.

Group Repeats:	9
Group Status:	Conditional
Group Usage:	Optional

Clarification:	The DAM/COD Group can be used at this level to detail any damage to an item of equipment, if a detailed inspection has been carried out at the time of the movement being reported. In most cases, however, such a detailed inspection will not be carried out until after a movement has taken place.
	In these situations it is recommended that a general indication of damage condition be transmitted in the FTX under EQD in this message (if damage has been identified at the time of the movement), and that detailed damage information follow later using the DESTIM message, which is designed for this purpose. This approach is likely to be adopted in North America and Australia/New Zealand.
	Recommendation JM4/279 refers.

M   DAM   DAMAGE

Segment Function:	A segment to specify equipment damages, such as the point of the damage on the equipment, and the type of damage.

Message Level:	Group 8
Segment Repeats:	1
Segment Status:	Mandatory
Segment Usage:	Mandatory
Sample Segment:	DAM+

Clarification:	The DAM segment must always be sent if Group 8 is to be used.
	Recommendation JM4/280 refers.

O	**SEGMENT GROUP 7 - EQD/TDT**

Group Function:	A group of segments to indicate details of the movement of containers by sea and by inland carriers, such as mode and means of transport and locations.
Group Repeats:	9
Group Status:	Conditional
Group Usage:	Optional
Clarification:	The TDT Group at this level is used to specify details of inland transport related to the equipment.
	Recommendation JM4/282 refers.

M	**TDT**	**DETAILS OF TRANSPORT**

Segment Function:	To specify the transport details such as mode of transport, means of transport, its conveyance reference number and the identification of the means of transport. The segment may be pointed to by the TPL segment.
Message Level:	Group 9
Segment Repeats:	1
Segment Status:	Mandatory
Segment Usage:	Mandatory
Sample Segment:	TDT+1+TRIP22+3+31'
Clarification:	The TDT segment must be sent if Group 9 is used.
	Recommendation JM4/283 refers.

O   SEGMENT GROUP 10 - EQD/NAD

Group Function:

Group Repeats: 9
Group Status: Conditional
Group Usage: Optional

Clarification: The NAD Group at this level identifies parties related to the item of equipment.

                            Recommendation JM4/287 refers.

M   NAD   NAME AND ADDRESS

Segment Function: To specify the name/address and their related function, either by CO82 only and/or unstructured by CO58 or structured by CO80 thru 3207.

Message Level: Group 10
Segment Repeats: 1
Segment Status: Mandatory
Segment Usage: Mandatory
Sample Segment: NAD+IO+CODE:160:87'

Clarification: The NAD segment at this level can be used to identify parties associated with the item of equipment.

                            Recommendation JM4/288 refers.

SUMMARY SECTION

M   CNT   CONTROL TOTAL

Segment Function:	To provide a control total.

Message Level:	Summary
Segment Repeats:	1
Segment Status:	Mandatory
Segment Usage:	Mandatory
Sample Segment:	CNT+1:1'

Clarification:	The CNT segment is Mandatory in the message and must always be sent, regardless of whether a control total is required by the receiving application. If no total is required, the segment may be used with dummy values in order to comply with EDIFACT requirements.
	Recommendation JM4/295 refers.

M	C270	CONTROL			M	
M	6069	Control qualifier			M an..3	
D			1	Dummy Value		
D			16	Total Number of Equipment		
M	6066	Control value			M n..18	
R				Number of EQD segments in the message (if 6069 = 16)		
D			1	Dummy value (if 6069 = 1)		
X	6411	Measure unit qualifier			C an..3	

M	UNT	MESSAGE TRAILER

Segment Function: To terminate a message.

Message Level: Summary
Segment Repeats: 1
Segment Status: Mandatory
Segment Usage: Mandatory
Sample Segment: UNT+14+2'

Clarification: The UNT segment must always be sent.

                           Recommendation JM4/296 refers.

M	0074	NUMBER OF SEGMENTS IN A MESSAGE	M n..6

R   *Number of segments*

M	0062	MESSAGE REFERENCE NUMBER	M an..14

R   *Same as 0062 in UNH*

APPENDIX A – Recommendation JM4/272

Extract from ITIGG document Principles and Rules for the implementation of Transport EDI Messages: TRANSPORT EQUIPMENT MOVEMENTS - DOCUMENT REFERENCE : JM4/ITIGG/96.101/v.131 to clarify the methods used in the FTX segment under the EQD details group to pass extra porperties of a container

RECOMMENDATION JM4/272 - USE OF THE FTX SEGMENT WITHIN THE EQD GROUP   O

FUNCTION OF THE SEGMENT
The FTX segment at this level is used to specify supplementary free text details which relate to the piece of transport equipment identified in the preceding EQD segment.

SAMPLE SEGMENT USAGE
FTX+AAI+++GENERAL INFORMATION'

NOTES ON RECOMMENDATION JM4/272

4451: It has been agreed that a HAN segment will be inserted at EQD level in all container messages, and DMRs have been lodged by ISA to this end. Because this will not be available until at least the D97A Directory, the FTX segment will be used on a temporary basis for handling instructions, using the appropriate code values from the HAN segment.
It has also been agreed that a COD segment will be added to messages to provide for construction materials where these are not associated with damage to the equipment. DMRs will be prepared.

4441: Where it is possible to use the FTX up to nine times, several coded descriptions of the equipment, its condition, and action to be taken or already taken can be specified.
This approach has been provided for because it is not yet possible to comply with General Recommendation JM4/27 (which stresses the need to avoid use of the FTX segment wherever coded values can be used), either because of shortcomings in the structure of the messages or uncertainty about future business requirements. This approach should therefore be seen as a temporary solution.

Using the codes below, a contractor might report for a given container as follows:

EQD #1 FTX #1   4451 = DAR 4441 = 7 (repaired)
        FTX #2   4451 = ABS 4441 = 111 (CSC problem)
        FTX #3   4451 = ABS 4441 = 68 (dirty)

Similarly a container operator might instruct a contractor to release a container as follows:

EQD #1 FTX #1   4451 = HAN 4441 = 50 (for export packing)
        FTX #2   4451 = ABS 4441 = 81 (prepared for Hides)
        FTX #3   4451 = ABS 4441 = 104 (vent open)

Several codes have been endorsed on a temporary basis by JM4, and will be maintained by ACOS until agreement can be reached on whether to have them maintained by SET on behalf of JM4, or inserted into the EDIFACT Code List.

These codes are available in a separate document published by ITIGG - "Codes for Use in the Free Text (FTX) Segment of the UN'EDIFACT Container Messages" (Document Reference **JM4/ITIGG/96.120**).

C107/C108 Different usages of these composites are recommended, depending on what value appears in DE 4451:

INVOICE INSTRUCTIONS (If 4451 = INV)

INTERNATIONAL TRANSPORT IMPLEMENTATION GUIDELINES GROUP

CODES FOR USE IN THE FREE TEXT (FTX) SEGMENT OF THE UN/EDIFACT CONTAINER MESSAGES

DOCUMENT REFERENCE: JM4/ITIGG/120/v.17

VERSION 1.7 - October 2015

Additions by SMDG Container Messages Subgroup

INTRODUCTION

Recommendation JM4/272 provides for the use of the FTX segment below EQD in the Container Messages for transmission of a variety of information, including reports on container construction, attributes, and condition and instructions for special services or actions to be performed on a container.

The full methodology for use of these codes in the FTX is detailed in Recommendation JM4/272.

The code list itself has been endorsed on a temporary basis by JM4, and will be maintained by ACOS until agreement can be reached on whether to have them maintained by SET on behalf of JM4, or inserted into the EDIFACT Code List.

Code Functions

The codes in this list are used in a variety of different functions:

- *Invoice Instructions (INV)* - instructions on preparation of an invoice.

- *Other Service Information (OSI)* - specific instructions relating to the preparation of the container.

- *Indication of Damage Condition (DAR)* - brief indication of container repair condition. Detailed damage reports are made using the DAM/COD segment group, where this is available in a message..

- *Current Equipment Condition (ABS)* - report on the current condition and/or status of a container, including confirmation that an action requested using HAN (Handling Instructions) has been performed.

- *Handling Instructions (HAN)* - instructions on action to be taken, or a condition to which a container should be prepared. The same codes can be used for the same functions in the HAN segment when it is present in a message.

Code Usage

Up to 9 repeats of the FTX segment are possible at EQD level in the container messages, providing for the use of the segment for several functions. The codes in this list are for use in DE 4441 of composite data element C107.

Using the codes in the FTX, a contractor might report for a given container as follows:

            EQD #1 FTX #1   4451 = DAR   4441 = 7   (repaired)
                    FTX #2   4451 = ABS   4441 = 111 (CSC problem)
                    FTX #3   4451 = ABS   4441 = 68 (dirty)

Similarly a container operator might instruct a contractor to release a container as follows:

            EQD #1 FTX #1   4451 = HAN   4441 = 50 (for export packing)
                    FTX #2   4451 = ABS   4441 = 81 (prepared for Hides)
                    FTX #3   4451 = ABS   4441 = 104 (vent open)

Dual Functionality

A key difference between this version of the list and earlier versions is the extension of many codes to cover both instruction and report for the same function. If a particular code appears in an instruction message, it indicates that this action should be taken. If it appears in a reporting message, it indicates that the same action *has been* undertaken.

"Other Descriptions"

The codes in this list have been consolidated from several sources, all of which framed the description of a code function in different ways. As part of the consolidation and rationalisation of the list, and the extension of codes to cover dual functions (see above), some rationalisation of descriptions was required.

Where a description has been changed or extended, the original description also appears for reference purposes as an "other description".

It should be stressed that changes or amendments to these descriptions should not require any changes to affect existing implementations.

Code Format

This list is alpha-numeric, including both pure alpha code values and numeric values. This reflects the fact that it is a consolidation of several different lists.

All new code values added to this list will be numeric, in accordance with a ITIGG decision at its Anaheim meeting in September 1997.

Changes in this Version

All changes or additions which appear in this document have been identified with shading.

Requests for New Codes

New codes will be added to this list upon request. All code requests must be lodged by email using the form at the SMDG website:

> http://www.smdg.org/smdg-code-lists/
